Associate Professor of Digital  
and Computational Studies

Bates College

“Zombifying Mathematics and Humanizing  
Mathematics”

**Monday, February 18, 2019 • Corbly Hall 105 • 4:00pm**

**Abstract**

In this talk, I will discuss work intended to engage a broader mathematics audiences. In the first talk, I examine the role of experiential engagement in mathematics. Instead of modeling zombies in pop culture, what happens when the zombies invade campus? In the second half of the talk, I pivot to what it means to humanize mathematics, through a narrative project called “math mamas”. I introduce ethnography and duoethnography as ways to explore identity and reclaim narratives about who is doing mathematics.

*A reception with light refreshments will be held in Corbly Hall  
immediately following the talk*
